

Coiler Unit (Complete)

The range of Crosrol belt-driven coilers enable older high maintenance coilers to be replaced with latest generation for high-speed operation.

The range of new Belt-Driven Coilers provides a complete replacement unit for older models of Crosrol cards. The new unit complete new Belt drives enables higher sliver take-off speeds to be achieved especially when used in conjunction with the Vertical Web-take-off unit (K-011).

New style bearing arrangements, result in lower maintenance of the unique planetary coiler head design.

Photoelectric Sliver Break detectors are additionally available to replace mechanical detectors if requested.

Replacement Coilers are available in 24" (610mm), 36" (910mm) & 40" (1020mm) diameters, with multiple height variations.

The Coilers are also available in both Manual and Automatic Can changing configurations.

Parts included in the Change Kit: -

- Complete Coiling Unit (fully assembled).
- Drive arrangement together with modified Sheet Metal panels if applicable.
- Full instructions on how to assemble the new Coiler to your old Carding machine.
