

Belt Driven Coiler Conversion

The Crosrol Belt Driven Coiler conversion kit allows for the complex and maintenance dependant Gear trains previously used on old style Coilers to be replaced with a simple Gearbox and Drive belt arrangement.

The modified belt driven coiler is quieter, simpler in design, and if combined with the Vertical Web collection unit (K-011) can offer improved running efficiency and higher production speed capabilities.

This new drive design continues with the established over center planetary coiling action for optimum can capacity, which eliminates the need for can turning mechanisms.

Replacement Belt Driven Coiler conversions are available in 24" (610mm), 36" (910mm) & 40" (1020mm) diameters,

Parts included in the Change Kit: -

- Helical Worm reduction Gearbox assembly.
- Upper Drive Wheel assembly including bearing arrangement.
- Drive Clutch together with Belts & Pulleys.
- Full instructions on how to assemble the new change kit to your old Coiler.
